

◆Precautions of Installation

1. This product is delivered to consumers after strict quality inspection,please don't disassemble it by yourself.
2. Before installing the shower set ,please must be flush waterway thoroughly to prevent impurities in the waterway from blocking the mixer and affecting the normal use of the product.
3. Please follow installation drawing pictures to install the faucet and make sure the installation is correct.Don't force installation to avoid damage the mixer and accessories.
4. The connection between the faucet and the cold and hot water pipes must be correct.Facing the faucet,hot water on the left and cold water on the right.
5. Once the mixer is installed,please turn on the water and check each connection for leaks.
6. The range of the faucet suitable temperature:suitable hot water temperature:55-85°C,cold water temperture:4-29°C.

The suggestion of hot water temperature is 55°C-65°C.

The range of faucet water pressure:0.05-0.75 Mpa.

Recommendation: 0.1-0.5 Mpa

◆Product care and maintenance to keep the faucet surface clean and bright,please follow these care tips:

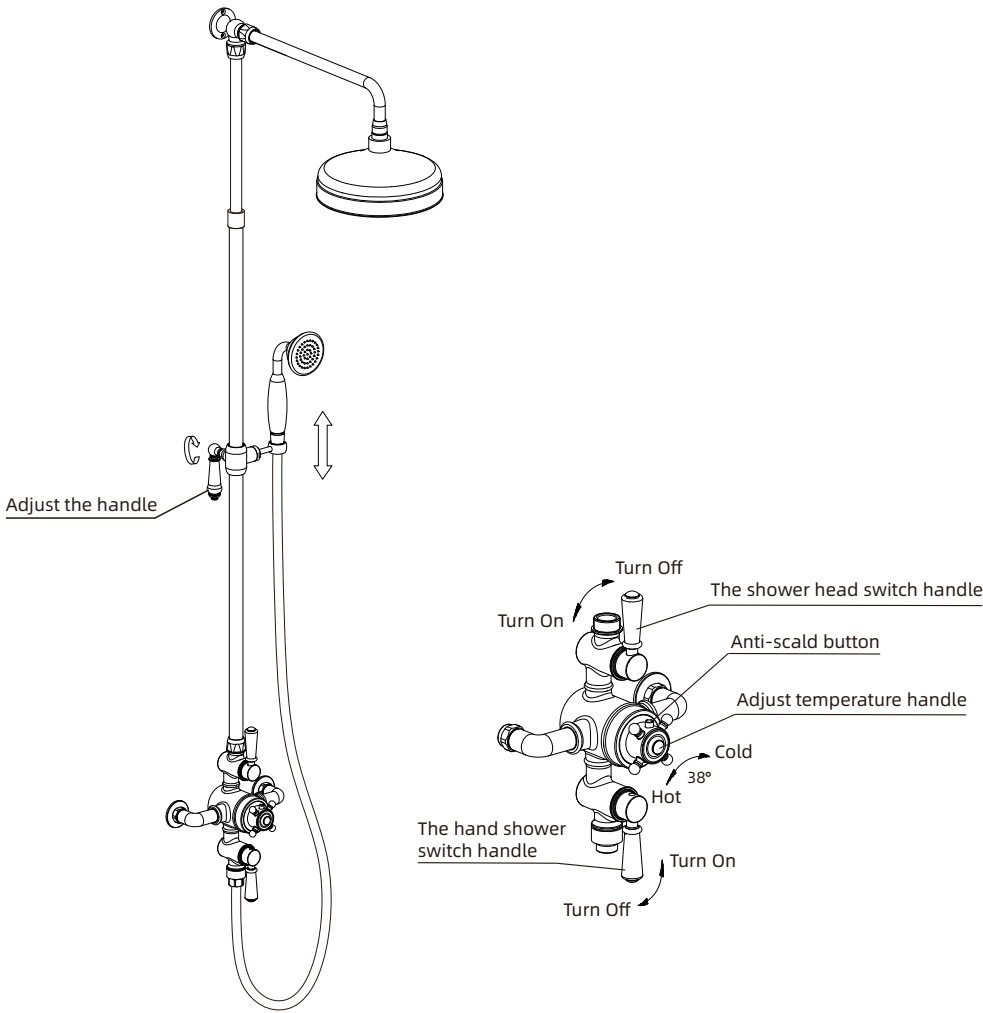

1. In genral,just clean with clear water and use a soft cotton cloth to wipe dry.
2. If water can't be rinse off,please use soft liquid cleanser to clean it.After cleaning,please dry the faucet with clean water and a soft cotton cloth.
3. Don't use any abrasive cleaning utensils to clean the faucet,such as metal brush,scouring pad,etc.
4. Don't use any acid, alkaline and abrasive cleaners to clean the faucet,such as stain removers,etc.
6. Please turn off the inlet valve in your home when nobody is at home to prevent damage to the product due to changes in pipe pressure.

Especially when the temperature near the mixer is lower than 0 °C, the main water valve switch should be turned off, and the remaining water inside the water pipe and the faucet should be drained, so as not to cause the internal water to freeze and crack the mixer and water pipe.

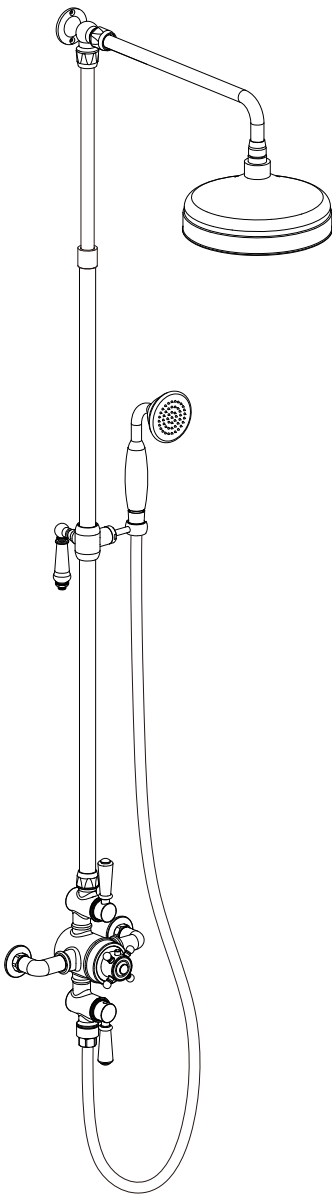

If you have any questions during installation or use, please contact the local dealer.

◆Instructions for Use

1. Turn the adjust temperature handle to control the water outlet temperature.Turn the handle clockwise to low temperature and turn the handle counterclockwise to high temperature.When the temperture rised by 38°C,you need to press the anti-scald button , then you can continue to increase the temperature.
2. Turn the shower head switch handle counterclockwise and the shower head outlet water.The greater the rotation angle then the greater the flow. Turn the hand shower switch handle clockwise and the hand shower outlet water.The greater the rotation angle then the greater the flow.
3. The rise and fall of press slide set button adjustable sliding sleeve position.
